Election/Restrictions

This application contains claims directed to the following patentably distinct species:

- A) Component including:
 - Spherical substrate
 - Topographical features
 - Diamond table
 - Load bearing/articulating surface

- B) Component including:
 - Spherical Polycrystalline Diamond Compact
 - Diamond table
 - Substrate
 - Interface between substrate and diamond table
 - Chemical bond
 - Load bearing/articulating surfaces

- C) Prosthetic joint:
 - Substrate
 - Diamond layer sintered to substrate
 - Interstitial spaces
 - Solvent metal catalyst
 - Gradient zone
 - Mechanical grip to secure diamond layer to substrate
 - Load bearing/ articulating surface

Art Unit: 3738

The species are independent or distinct because the joint of group C is a prosthetic joint having unique subcombination of the interstitial spaces and zone gradient that are not required in groups A and B. Groups A and B are directed to a class of "joint components" not specifically to a prosthetic joint as set forth in group C. Moreover, Group A requires the unique subcombination of the topographical features and a diamond table that are not required in groups B and C. Group B, requires the unique subcombination of the interface and chemical bonding that are not required in groups A and C.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

A telephone call was made to Mr. McCarthy on 4/17/2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

Art Unit: 3738

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).
